Chloe Lu

Göteborg/Stockholm, Sweden • 076 297 9518 • chloeluxyu@gmail.com • LinkedIn

MSc student in Interaction Design and Technologies at Chalmers, with a BSc in Computer and Systems Sciences. I design and test interfaces for complex technical systems, from early research through wireframes to working prototypes, so people who aren't technology enthusiasts can actually use them. Fluent in Swedish, English and Mandarin.

EDUCATION

MSc, Interaction Design and Technologies, Chalmers University of Technology
Göteborg • Aug 2025 – Present

BSc, Computer and Systems Sciences, Stockholms Universitet
Stockholm • Aug 2021 – Jun 2024
Bachelor's thesis: studied how designers with different levels of technical experience used a new plugin to move Figma designs into Android Studio, and where that non-expert bridge broke down, co-authored with Lova Avolten

Project Management Certificate, Google / Coursera
Online • Jul – Sep 2024

Academic Projects

User-Friendly AI Insights from Manufacturing Data, Data Driven Product Realization, Chalmers University of Technology
Industry partner: Good Solutions AB, Göteborg • 2026

- Contributed to a team of five that built a proof-of-concept pipeline for an industry stakeholder, ingesting shop floor production data, computing OEE and loss analysis, and using a large language model to translate a technically dense process into language non-specialist stakeholders could act on directly.
- Personally ran the data analysis and translated stakeholder needs into requirements for the team's interactive Python dashboard, defining what a non-technical user needed to filter, validate, and explore, OEE, downtime, and scrap trends, without needing to understand the underlying calculations.
- Processed raw shop floor data into a full report in a few minutes versus hours or days of manual analysis, and evaluated the system's real limits, gaps in contextual reasoning, data privacy trade-offs, and hallucination risk, the same kind of judgment call an automation interface has to get right before a non-expert user can trust it.

Frame Yourself in Time, interaction design project, Chalmers University of Technology
Concept pitch with Vasakronan, proposed for Lipsticks Lookout, Göteborg • 2026 • Project page: idxpo.se/2026/group_03

- Co-designed a generative AI installation concept, in collaboration with Vasakronan, for a busy elevator waiting area, leading concept development and user testing while building a working prototype of the AI generation pipeline (ComfyUI) that placed visitors into historical Gothenburg scenes, and a real-time projection experience (Three.js, Python), designed so a visitor with no technical background could engage with it intuitively.
- Used pilot testing findings, engaging but too slow to generate, to define two concrete redesign paths for the next iteration, evidence that the killer feature of an experience only becomes clear once real users have actually tried it.

PROFESSIONAL EXPERIENCE

Project Moderator (Client: Apple), Dataforce
Stockholm • Mar 2025 – Jun 2025 & Jun 2026 – Aug 2026

- Facilitated and moderated 100+ on-site user testing and AI training data collection sessions for Apple across two engagements, running participant briefings, guiding structured research protocols, and capturing behavioural observations live.

- Documented findings, tracked open items, and translated on-site observations into clear, structured notes and datasets for engineering and research stakeholders.
- Executed Python scripts to automate file handling, validate data quality, and manage structured uploads to internal systems, ensuring consistent, scalable data pipelines across sessions and sites.
- Authored and rolled out SOPs that clarified handoffs across teams and enabled consistent execution as sessions scaled across cohorts and a second engagement.

Research Consultant, Opticom International Research
Stockholm • Nov 2024 – Jan 2026

- Conducted qualitative and quantitative user research with international stakeholders across multiple markets, benchmarking regional patterns and emerging trends to extract transferable insights that informed strategic decisions.
- Synthesized complex, multi-market datasets into structured comparative analyses, dashboards, and reports, translating findings into actionable recommendations for cross-functional product stakeholders.

Program Coordinator, Absolute Internship
Stockholm & Barcelona • Jun 2025 – Aug 2025

- Managed end-to-end program operations for an international student program in Sweden, owning multi-party scheduling, partner matching, and weekly programming.
- Acted as central point of contact between students, host companies, internal teams, and external partners, aligning stakeholders and following up to keep deliverables on track.
- Maintained shared trackers, status updates, and structured documentation across the program, improving coordination and helping the team catch issues before they affected delivery.
- Facilitated weekly check-ins and networking sessions, identifying recurring issues and proposing simplifications that were adopted by the team.

UX/UI Intern, Buddycompany
Stockholm • Jan 2024 – Jun 2024

- Coordinated research, usability testing, and A/B test execution across web and mobile products, working with developers, marketing, and analytics.
- Worked in weekly sprint and stand-up cadences with developers and the marketing team, surfacing dependencies and risks early to keep delivery on schedule.
- Designed and iterated responsive interfaces and end-to-end user flows for both the web and mobile applications, taking work from wireframe through interactive prototype to engineering handoff.
- Combined CRM and Google Analytics data to prioritise redesigns, raising task completion by 20% and engagement by 30%.

SKILLS

Research & Analysis: Qualitative and quantitative analysis, comparative benchmarking, user interviews, usability testing, A/B testing, journey mapping, stakeholder mapping.

Tools: Figma, Webflow, WordPress, Google Analytics, SurveyGenerator, Microsoft Office (Excel, Word, PowerPoint), Jira.

Project & Coordination: Project tracking, milestone planning, stakeholder communication, status reporting, SOP creation, agile / stand-ups, risk follow-up (Google PM Certificate).

Technical: Python (scripting, data validation, automation), HTML, CSS, JavaScript, Java; comfortable reading technical documentation and APIs.

Languages: Swedish (fluent), English (fluent), Mandarin (native).
